# PROJECT SOLUTIONS

Providing effective and innovative solutions to all types of projects

## ABOUT US

Taylor Project Solutions is a design and project management business specialising in the delivery of construction, fit-out and data centre projects as well as general building services solutions for all types of buildings.

Formed and led by Andy Taylor, who has over 20 years of experience in the design and management of building and engineering projects in the ICT, industrial, commercial and utility sectors, Taylor Project Solutions offer a fast, mobile and independent solution to any project challenge.

From our core service platform we can draw on skills from collaborative partners to deliver a multidisciplinary service.

The core values of Taylor Project Solutions reflect a strong commitment towards sustainable development, always seeking to improve the efficiency of systems and the working and living conditions of people with our design solutions.

## OUR EXPERIENCE

Our knowledge and experience coupled with leading edge design, co-ordination and project delivery tools ensures that innovative and effective responses can be provided quickly and accurately to streamline projects.

We embrace energy efficient options in all of our designs and ensure that sustainability and capital vs expense costs are assessed prior to implementation of any technologies.

Delivering technically excellent projects in a tightly controlled manner is our passion and we believe that the control of deliverables, cost, time and safety on all projects is paramount in every case from the smallest to the largest.

## OUR APPROACH

We work collaboratively with Clients, Professionals and Contractors to provide the optimum solution to any project challenge.

## KEY SERVICES

Our key areas of expertise are IT & Data Centre spaces, Facilities Management projects and Engineering Services design and co-ordination.

Services provided include:

- Project Management
- Mechanical Building Services design - heating, cooling and ventilation
- Electrical Building Services design - power, lighting, data, security and safety
- Public Health design - water, drainage and fire control
- Value Engineering
- Energy Audits
- Installation Audit, due diligence and replacement strategies
- Sustainable Design and advice
- Design & Build solutions

“All projects need to be completed on time and in budget whilst meeting the needs of all stakeholders. This is always an interesting challenge requiring a high level of communication between all parties.”

**Andy Taylor, Director**

## EXPERIENCE

### DATA CENTRES

#### Facility resilience and energy efficiency

We have extensive experience on the design and management of mission critical facilities from 100sqm Tier II hub rooms to 20,000sqm Tier IV co-location data centres and everything in between across Europe, Middle East and Africa.

We understand the criticality of the services run in these facilities and the trade offs between low PUEs and capital investment. Our approach is to deliver low PUEs on all projects through detail design, plant selection, free cooling and comprehensive commissioning.

### COMMERCIAL

#### Effective corporate facilities

Our commercial experience ranges from the refurbishment of office space to provide fresh, modern and efficient premises for users to the design of services for new build, multi-thousand square foot offices and stretches across Europe, the Middle East and Africa

### ENERGY

#### Efficient solutions

Our experience in the Energy sector ranges from carrying out energy audits for individual facilities to designs for building services for Energy-from-Waste plants.

We have provided design duties and advise for a number of facilities in the UK and Ireland.

### OTHER FACILITIES

#### Excellence in every project

We have a vast range of experience in all types of buildings from education through retail to healthcare and deliver excellence and appropriate innovation on every project.
